

**Provider of specialised and
complimentary crop solutions
to the agricultural industry**

with us you are
**growing
goodness**

With an integrated group of affiliates,
the InteliChem Group is ensured
to make a valuable contribution
towards **food security and
sustainable agriculture**
in the whole of Africa.

The challenge today is to create greater food security in an environmentally sustainable way for an increasingly populous world. This can be done by creating a worldwide step-change in farming productivity.

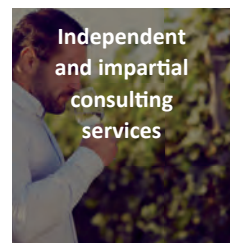

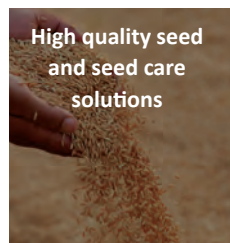

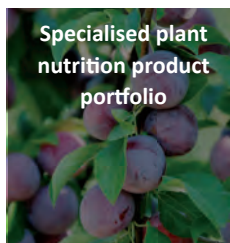

High yielding, quality and safe food are currently the key focus. The comprehensive value offering of **InteliChem** linked to our specialised, focused and complimentary business portfolio, enables us to provide growers with a complete crop solution for a large variety of crops, complementing the whole food supply chain.

Through the provision of intelligent crop solutions, we are ideally positioned to be the trusted business partner to our customers.

- Integrated crop protection and specialised plant nutrition
- Bio-rational offering with food safety focus
- High quality seed and seed care expertise
- Dedicated in-house product development and formulation
- Independent and impartial agricultural consulting services
- Innovative supportive technology

**A HOLISTIC APPROACH
TO YOUR BUSINESS**

OUR CROP SOLUTIONS

- **InteliGro** provides integrated crop protection and specialised plant nutrition solutions. Strong emphasis is placed on developing our bio-rational offering with food safety focus.
- **InteliSeed** has a high-quality seed range with supporting seed care expertise. The focus areas are vegetables, maize, oil seeds, cover crops and pastures.
- The specialised plant nutrition range of the Group is developed by **InteliFert** with innovative products such as controlled release fertilisers and biostimulants. **Carbology®** is an innovative nutrition concept which has been developed and applied with great success over more than a decade optimising yields and quality.
- Independent and impartial agricultural consulting services are provided by **ProCrop**, with 6 functional areas covered, i.e. crop protection, plant physiology, soil and irrigation, research, training and analytical services.
- **Meridian Agritech** provides the Group with dedicated in-house product development with its own formulation facilities, focusing on differentiated and new generation products, catering for the changing needs of the market.
- Innovative supportive technology compliments the package with real time information, reporting and decision-making tools assisting our experts in making accurate and informed recommendations.

With our head office situated in Stellenbosch and regional head offices in Wellington, Viljoenskroon, Germiston and Krugersdorp, the Group is a leader in the South African agricultural industry.

We are committed to continuously offer specialist products and services encompassing a holistic set of solutions for crop production.

We have developed a unique and differentiated portfolio of crop solutions through our complementary businesses.

The **InteliChem** Group is closely aligned with various multi-national as well as leading post-patent suppliers, and through our comprehensive distribution channels, widespread market coverage is offered to our supplier base.

Our broad supplier base ensures that new technology is accessible to the Group which is offered to our customers.

OUR GROUP VISION:

Solutions for sustainable crop production

OUR MISSION:

To be the trusted business partner to growers by providing intelligent crop solutions

Our deep rooted principles that define our core values can be summarised as follows:

- **INTEGRITY** – to always maintain the highest levels of honesty and transparency
- **INCLUSIVE** – to include people from different backgrounds in our business and the opportunities it present
- **EXCELLENCE** – to strive for the best in:
 - o Results – average is simply not good enough
 - o Innovation – always exploring new ideas, technology and processes
 - o Consistency – maintaining a high level of service and expected outcome
- **RELATIONSHIPS** with all stakeholders marked by:
 - o Respect – to all stakeholders and the environment
 - o Trust – integrity and expertise
 - o Collaboration – together we achieve more
- **FUN** – we want to enjoy what we are doing

TRIPLE BOTTOM LINE

The only bottom line that most companies care about is profits.

However, we firmly believe business should be:

- a force for good and
- benefit more than its shareholders.

So, as well as being profitable, our mission is also to benefit:

- the environment and
- the communities in which we operate.

Together they are known as “People, Planet and Profits”. We consider ourselves as a positive contributor on all three counts.

with us you are
growing goodness

IntelChem
intelligent crop solutions

IntelGro is focused on adding value to our clients by ensuring sustainable technical solutions and by focussing on optimising yields and quality crop production. On a local and international front, there is a growing demand for low-to-no residue food.

At IntelGro we ensure that we stay on track with the changes in the marketplace and include these changes as part of our Integrated Crop Production approach.

The integrated approach includes the responsible use of crop protection products, the implementation of specialised plant nutrition as part of a holistic approach (Carbology®), Biological Solutions (InteliBio Solutions) and supportive technology, complemented by expert service and knowledge transfer on farm level.

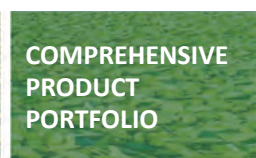

A combination of products, skills, technology and expertise is offered through specific programmes and applications to help ensure sustainable agriculture.

WHAT WE OFFER:

- Sustainable crop protection
- Integrated biological offering - InteliBio Solutions™
- Customised plant nutrition advice
- Specialist technical support and a comprehensive product portfolio
- Professional crop specialists
- Innovative supportive technology

OUR FOCUS AREAS

Integrated Pest Management or IPM, as it is commonly known, is a flexible system of managing pests which is designed to be sustainable, making the best use of all available technologies to manage problems effectively and safely. IPM involves using the best combination of cultural, biological and chemical measures for particular circumstances, including plant biotechnology as appropriate. This provides the most cost-effective, environmentally sound and socially acceptable method of managing diseases, insects, weeds and other pests in agriculture.

This is exactly the approach that IntelGro follows to help producers with long-term sustainable crop solutions.

- 1) It begins with a good knowledge of the specific crop involved and the challenges, plant physiology, plant biological and production aspects important to the crop. This also includes an understanding of the specific cultivars, seed varieties, rootstocks, and their specific susceptibility to certain pests.
- 2) In addition to the crop knowledge, the knowledge of the pests (weeds, insects, diseases, nematodes) and the potential economic impact is an important focus area. This also includes monitoring techniques and assisting growers with monitoring practices. With the correct monitoring information, better decisions can be made with regards to actions required and the right solution for the specific situation.
- 3) Thirdly, **IntelGro** has a sound knowledge of the crop protection solutions that include chemical, biological and cultural management options.

1

There is a growing demand on a local and international basis for solutions that are more environmentally friendly, have minimum impact on beneficial organisms, are safe to use and can be used as part of a low-to-no residue and even no pesticide food production approach.

In addition to this, there is also a big focus on bio-stimulants and the development of new, very effective products that can be applied to achieve specific responses in the plant. Due to the intensity of crop production and the pressure on rotation systems resulting in the development of soil-borne disease challenges, root health and root conditioning are also very important to ensure effective uptake of water and nutrients and have a direct impact on overall plant health. Everything starts in the soil and by focusing on long-term soil enhancing practices, it can have a very positive impact on sustainability for current and future generations. All of these aspects can have an impact on food security and therefore the responsibility lies with us to put actions in place and provide good, scientifically based technical solutions.

BioControl:

Integrates different biological control agents as part of an IPM strategy and is also used to produce low-to-no residue and pesticide free crops. The products in this range consist of specific viruses, micro-organisms, macro-organisms, plant extracts, mass trapping techniques, and also mating disruption that won't have a negative impact on the environment, are safe for use by producers and have no residues on the crop produce therefore being very safe for the end-user.

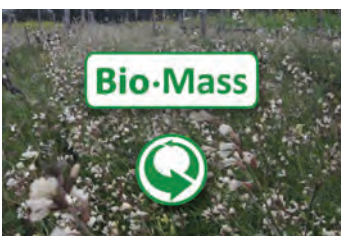

BioStimulants:

The bio-stimulant products that form part of this category focus on plant stress, plant growth, and yield. Amino acids, kelp-based products and PGPR's form the basis of the bio-stimulant range of products.

Bio-Inoculants:

With the focus on root health and root conditioning to assist with better water and nutrient uptake, the range of products consist primarily of specific micro-organisms that form a symbiotic relationship with the plant roots. This is a very exciting area and forms a close relationship with the plant nutrition approach on the crops and is incorporated as part of the plant nutrition Page 7 approach to ensure that the chemical fertiliser inputs are managed responsibly and to help minimise the impact of nitrogen leaching.

Bio-Mass:

This is a long-term approach and include soil rectifying principles (measurements, advice and recommendations) and then incorporating certain strategies for example cover crops, green manure, brown manure and management practices, to help enhance the soil health over time.

IntelGro works closely with other experts in the field to assist our clients with the right strategy and to monitor the success of these actions that are implemented.

2

CROP SOLUTION SPECIALISTS

InteliGro invested in the Intellect Solutions concept, where we gather independent and statistical trial information on various trial sites countrywide to improve our technical advice to stay a leader in the industry.

This scientifically based approach is of cardinal importance in a market where an overload of products and opinions are available.

3

InteliGro is very proud of the quality Crop Solution Specialists (CSS) that are actively involved in the field to provide growers with the right technical advice and support to help ensure good, quality yields.

As part of the support to the Crop Solution Specialists, **InteliGro** also have a strong technical team that include Soil Scientists, Horticulturist, Agronomists, and Entomologists. To ensure that the CCS stays ahead with regards to the latest developments and solutions, **InteliGro** has intensive annual training sessions on all the major crops including, Pomefruit, Stonefruit, Grapes, Citrus, Grain, Small Grain, Vegetables, Potatoes as well as other selective crops.

Supportive to this is also the annual Biological and Plant Nutrition training that is very relevant in the industry. In addition to the technical training programmes there is also training taking place on leadership development, professional development and business development. **InteliGro** is also proud to be part of the Croplife Continuous Professional Development programme and most of the **InteliGro** Crop Solution Specialists have received their Accredited Croplife member cards.

At **InteliGro**, training forms a core part of our philosophy to help ensure that we have the right quality people in the field and support from head office, to add value to our clients. We believe this is a distinguishing factor for **InteliGro** and our approach to professional training is gaining further momentum.

We started a formal program in 2018 where external crop courses were presented. Certificates were obtained in different crops including potatoes, grapes, citrus and pomefruit and we are now in the process of developing **InteliGro** certified training modules that will add further value to our training programme.

Plant Nutrition

4

InteliGro focuses on specialised plant nutrition solutions supported by a team of experienced Plant Nutrition Specialists.

The plant nutrition programmes and products developed in combination with Intelifert and other well-known fertiliser suppliers are backed by advanced scientific research with the aim to improve plant health and enhance crop yield as well as conditioning of soil using innovative bio-stimulants, plant nutrition products and specialised fertilisers.

It is our vision to improve both food safety, as well as to increase yield quantity and quality to ensure sustainable farming without neglecting the environment.

THE PRINCIPLES OF CARBOLOGY®

Carbology® refers to the methodology of optimising plant carbohydrate management in fruit trees / plants with high production capacity to minimise alternate bearing and ensuring the production of high-quality marketable fruit. Carbology® is not a quick fix general programme, but incorporates multi horticultural disciplines into a year management tool to ensure year-on-year sustainable production and tree quality.

The Carbology® programme focusses on the specific phenological growth stages of the tree/plant and the activation and/or manipulation of the phenological stages with the use of specific bio-stimulants and nutrients combined in a programme. Depending on the climatic influences and orchard management, this programme will be amended and managed during the season to ensure optimal fruit load and quality at harvest. The aim is to ensure the maximum available carbohydrate availability throughout the plant's life cycle.

The success of **InteliGro's** Carbology® technology lies in the knowledge and service how to integrate plant physiology, soil health, water management, plant nutrition and bio-stimulants to optimise crop yield and crop quality.

PRODUCTS

Bio-Stimulants

Bio-stimulants are products of diverse origins (humic substances, seaweed or plant extracts, protein hydrolysates, amino acids, polysaccharides and inorganic compounds) without residues. Bio-stimulants act on the physiology of the plant in different ways to enhance the vigour of the crop, the yield and the quality of the harvest.

InteliGro has a wide range of these products as part of its InteliBio Solution approach. To name a few: Fitamin 24 is a plant growth promoter containing L-Amino Acids produced by Bioiberica in Spain, using an exclusive method of enzymatic hydrolysis. The soil application of StresSal was shown to reduce the osmotic potential thus helping the plant to tolerate salt stress better. Goëmar BM Plus and Calibra Carbo are ascophyllum nodosum based products which act as plant physiological activators of fruit setting and plant growth. It activates trees' nutrition uptake and distribution in the plant and flowering promoters. It optimises fruit setting and gives better contribution to the fruitlets.

Specialised Granular Fertilisers

CRF nutrition or otherwise known as controlled release fertilisers entails the concept where high quality fertilisers are coated with special technology that enables the nutrients to be released over specific periods to co-inside with the plant's nutritional requirements. **InteliGro** makes use of the Multicote range of CRF products which is being manufactured by Haifa, a world leader in CRF technology.

Water Soluble

InteliGro has its own unique water-soluble fertiliser brand name called Qula. High-quality and fully soluble fertilisers, excellent for fertigation, hydroponics and foliar nutrition. Chelplex is an ultra-fine powder amino gluconate complex mineral foliar nutrition range. The Chelplex product range consists of single element formulations and mixed nutrient formulations to accommodate specific crops

Liquid Foliars

Liquid foliar products include, suspension concentrates (Quatro range) and sugar amino acid complexed products (Carbology and AG range).

Soil Amendments

Products include flowable gypsum and calcium, chicken manure pellets, nitrification inhibitors, humic and fulvic acids, soil bio fertilisers (bacteria and fungi).

The Carbology® programme is based on the synergistic effect of all the products and bio-stimulants working together and not based on the effect of only one product.

The use of technology in the agricultural sector is an international mega-trend and will in future be a distinguishing factor in business for producers and input suppliers.

As part of **InteliGro's** drive to improve solutions and decision making through the application of goal orientated technology, we offer the following value-adding projects.

5

InteliFarm

 **InteliFarm**
data

- Product information database and other supporting aids

 **InteliFarm**
monitor

- Electronic monitoring traps and aids

 **InteliFarm**
climate

- Weather stations and disease models

 **InteliFarm**
precision

- Satellite image and application technology

 **InteliFarm**
calibrate

- Calibration aids

The InteliFarm app is available on Google Play and Appstore and is being used effectively.

The app has the following capabilities:

- Sharing of product labels.
- Generate online recommendations.
- Generate spray instruction. (Future Development).
- General data management.
- Streamlined record keeping.

we recently launched the breakthrough product in effective & ecological FRUIT FLY MANAGEMENT

CeraTrap® is a Biological Solution which can successfully be used in an Integrated Pest Management programme against the following fruit fly species:

TARGET SPECIES

- Mediterranean fruit fly (*Ceratitidis capitata*)
- Oriental fruit fly (*Bactrocera dorsalis*)
- Marula fruit fly (*Ceratitidis cosyra*)
- Natal fruit fly (*Ceratitidis rosa*)

BENEFITS

- Highly selective
- Non-toxic, biological solution
- Provides comprehensive fruit fly control
- Compatible in an integrated pest management program
- Population suppression in consecutive seasons
- Neither harmful nor disruptive to beneficial insects
- Attracts fruit flies of all species including *Bactrocera dorsalis*
- Reduced labour intensity
- No mechanical damage close to harvest
- 100% compliance with regulations on export crops

MODE OF ACTION

MASS TRAPPING

- Hydrolysed protein attractant (no chemicals)
- Killed by drowning (no escape)
- **CeraTrap®** bait attracts fruit flies of all species, predominantly adult females.

CeraTrap® is registered on the following crops:

- Table Grapes
- Stone Fruit
- Pome Fruit
- Citrus

BioControl

Innovative supplier of a comprehensive, high quality range of integrated crop solution products

Meridian Agritech is a post-patent agricultural crop protection company, with the focus on a high quality, innovative range of products in South Africa.

With its dedicated in-house product development and own formulation facilities, focused on differentiated and new generation products, Meridian Agritech caters for the changing needs of the market.

The company was founded in 2000 due to a demand for quality and innovative post-patent products in the crop protection industry. In the latter part of 2018, IntelliChem integrated Meridian Agritech as a wholly owned subsidiary, strengthening its position through strategic input, product development engagement, consolidation of core functions and intergroup synergies.

WHAT WE OFFER:

- Dedicated in-house product development
- Differentiated and integrated crop solution range of products
- Long-standing relationships with leading international suppliers
- Formulation facilities and quality control laboratory
- Logistical infrastructure and warehousing

FUNGICIDES

INSECTICIDES

HERBICIDES

PLANT GROWTH REGULATORS

SEED TREATMENT

ADJUVANTS & WETTERS

COMPANY MISSION

- To consistently develop and release innovative post-patent products
- To produce products with the highest quality standards
- To be environmentally conscious in all aspects of our business

RESEARCH AND INNOVATION DEPARTMENT

Meridian Agritech is actively involved in product development trial work for crop protection and biological products. Hundreds of trials through our in-house Research and Innovation Team and carefully selected contractors, are performed annually across South Africa as part of our strategy to remain an innovative and informed leader in the industry.

With our head office in Germiston, Meridian Agritech has a nationwide support structure and distribution network.

Our Regulatory Department ensures that data is converted to a format complying with all regulatory requirements.

The Product Innovation Team, using internationally renowned software, are responsible for the compilation of trial protocols, reporting and data compilation. The collating and re-use of data is therefore coordinated and structured in order to optimise the utilisation of trial data.

The main crops that are focused on are: Pome Fruit, Stone Fruit, Citrus, Table Grapes, Wine Grapes, Potatoes, Summer Grains (Maize, Sunflowers & Soybeans) Cereals (Wheat, Barley, Oats & Canola) and Vegetables.

LABORATORY & QUALITY MANAGEMENT

The in-house laboratory at our head office is responsible for all the company's product quality requirements and is essentially involved with every consignment with a Meridian Agritech label. This is an important key component of the business for the following reasons:

- To test the technical material of suppliers in order to confirm the quality of raw materials proactively and to test wettable powders and granules which are imported as finished products.
- As an integral part of the product development team and process, the laboratory helps with the compilation of theoretical formulations of various products, as well as the testing of solvents and the performance of stability tests of new products.
- The laboratory is also responsible for the control of all retention samples that are kept for a minimum period of 2 years after each production run.

Meridian Agritech supports a stewardship role in agriculture and encourages the responsible use of agrochemicals.

with us you are
growing goodness

IntelSeed offers specialised seed and seed care solutions through dedicated and qualified Seed Specialists and Representatives in a nationwide network throughout South Africa.

IntelSeed is the well-established and integrated representative brand which forms part of the IntelChem group, offering a complete and integrated crop solution service. With our headquarters in Krugersdorp and various depots throughout South Africa, **IntelSeed** is in the favourable position to supply all our growers, processors and nurseries with high-quality material, the best genetics and disease treated packages.

IntelSeed's product portfolio is strengthened through the exclusive distribution of Syngenta vegetable seeds, and complemented by their sunflower portfolio. This secures constant introduction of new genetics in the vegetable and sunflowers seed sectors.

In addition, selective vegetable and oil seed crop markets are supplemented from other supply sources to complete the comprehensive seed portfolio.

A combination of products, skills, technology and expertise through specific programmes and applications is offered to help ensure sustainable agriculture.

WHAT WE OFFER:

- Seed and seed treatment expertise
- Latest genetic material
- Screening, testing and evaluation of potential varieties
- Trial sites in different geographical regions of South Africa
- Specialising in tested varieties of:
Vegetable, maize, oil (sunflower & soybean), cover crops and pasture seeds
- Specialist technical advice and support
- Professional seed specialists

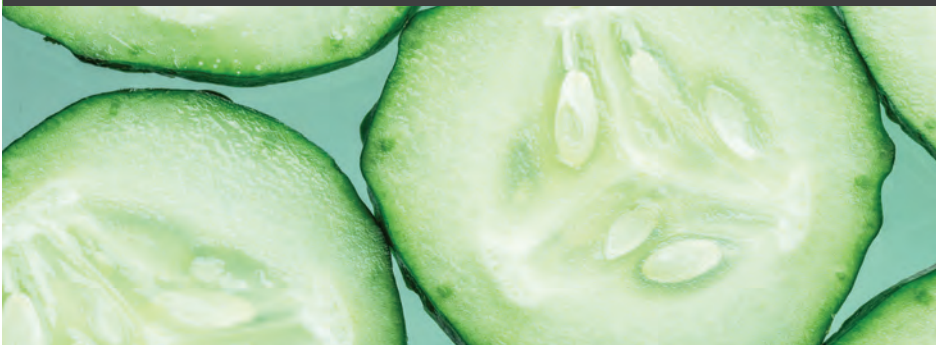

Through the integration with IntelliGro Crop Solution Specialists, the **InteliSeed Seed Specialists** promote an integrated crop offering with specialist focus, while remaining complementary towards the objective of optimised output and quality.

TRIAL SITES

InteliSeed invested in the combined Intellect Solutions trial sites, together with IntelliGro and Meridian Agritech, to verify certain suggested solutions and to give the opportunity to test different products and programmes to the benefit of our clients.

This programme supports our ambitions to bring new genetics to South African producers. These scientific trials support our technical advice and keep us a leader in the industry. This is very important in a market where there is an oversupply of different products and opinions.

Currently we have trial sites in three vastly different areas to supply the very best information, with more trial sites that are planned in the nearby future.

InteliSeed is a proud supplier of the following crop seeds:

Vegetable Seeds

InteliSeed focuses on the trustworthy recommendation of seeds genetics for higher yielding crops and for better quality food. **InteliSeed** is the exclusive distributor for Syngenta Seeds in South Africa, and our range is supplemented by other reputable suppliers.

• Beans	• Cauliflower	• Melon	• Spinach
• Beet	• Chinese Cabbage	• Microgreens	• Squash
• Borecole	• Cucumber	• Onion	• Sweet corn
• Broccoli	• Eggplant	• Peas	• Sweet peppers
• Brussels sprouts	• Herbs	• Pumpkin	• Tomatoes
• Butternut	• Hot Pepper	• Radish	• Watermelon
• Cabbage	• Leek	• Rape	
• Carrots	• Lettuce	• Rootstock	

Oil Seeds

SUNFLOWER SEEDS

InteliSeed continuously screen new genetic material to expand and strengthen our portfolio, which is strongly supported by a strong supplier base.

We offer cultivars that are well established with high oil content, high yield potential and excellent area adaptability. Syngenta and Agricol are our main suppliers, providing a comprehensive portfolio.

SOYBEAN SEEDS

InteliSeed is the national distributor of the SOYIELD range cultivars from Southern Hemisphere Seeds, with tested cultivars commercially available for producers.

We have distribution rights of Agricol which present us with a complete range.

CANOLA SEEDS

InteliSeed is the exclusive distributor of the Belinda canola varietal seeds from the BASF range and actively collaborates in the development of new varieties.

We also have access to ranges from other reputable suppliers to complete its offering in different areas.

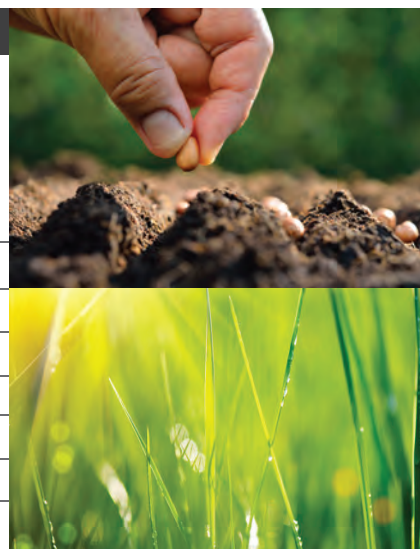

Pasture Seeds

InteliSeed supplies pasture seeds from a range of unique seed varieties that has the potential to bring about a total revolution in grazing and land use in South Africa.

The main suppliers of our portfolio are AGT Foods, Agricol and Brazseed.

• Arrowleaf clover	• Couch grass	• Kikuyu	• Sun Hemp
• Babala	• Cowpeas	• Lucerne	• Tall Fescue
• Bahia grass	• Dolichos	• Oats	• Teff
• Blue Buffalo grass	• Forage Peas	• Perennial Ryegrass	• Triticale
• Braz	• Forage Sorghum	• Rhodes grass	• Weeping love grass
• Clover	• Grain Sorghum	• Rye	• White Buffalo grass
• Cocksfoot	• Grazing Vetch	• Smuts finger grass	• Wool grass

Maize Seeds

• White	InteliSeed is a supplier of a range of leading white maize seeds to maximise farming profitability. Our range is supplied by Pioneer, Pannar, Agricol & AGT.
• Yellow	The InteliSeed range of yellow maize offers optimised cultivars from Pioneer, Pannar, Agricol & AGT.
• Green	InteliSeed is a proud supplier of the SC 701 variety supplied by Pannar.

Other

COVER CROP SEEDS

The InteliSeed cover crop portfolio is supplied by AGT Cover Crops & Forages, a division of AGT Foods Africa. AGT produces and supplies high quality seed varieties that are suited to the South African context.

WHEAT SEEDS

InteliSeed's product range includes wheat varieties from the Pannar and Agricol range to optimise productivity.

LEGUME SEEDS

InteliSeed's objective is to offer a wide range of legume seeds to meet the unique needs of the farmer. Our portfolio is mainly supplied by AGT Foods

DRY BEANS SEEDS

InteliSeed is constantly seeking to expand its multi crop product range. We supply a comprehensive range of bean varieties from Agricol and Pannar.

Procrop is an all-inclusive agricultural consultancy company with consultation interests both nationally and internationally, focussing on crop production activities.

ProCrop as an agricultural consultation service provider, investing in human intellect and capacity, innovative technology, novel knowledge and effective communication with clients with the goal of optimising farming output and sustainability.

This concept has been branded as Agri-Intellect and refers to the delivery of a multi-disciplinary service to the agricultural community based on the above-mentioned principles. ProCrop is not involved in the direct or indirect marketing of any products related to the field of consultation and proud itself in the provision of independent and impartial advice.

WHAT WE OFFER:

- Experienced professionals in various crops and agricultural fields
- Practical and scientifically sound recommendations
- Long-standing relationships with progressive clients
- Long-standing relationships with research institutions and academic experts
- Specialist training course provider
- Provision of research services

COMPANY VISION

To establish sustainable agriculture on the African continent through developing and applying agri-intellect.

MISSION

To be the service provider of preference independent for producers of agricultural crops on the African continent.

RESEARCH

TRAINING

RESEARCH

ProCrop has a team of qualified scientific researchers that can conduct scientifically sound assessments in the following fields but not limited to:

- Spray application evaluations
- Pest and disease forecasting systems
- Field evaluations of plant protection related products

Our research activities are aimed at the development of new expertise and technologies as well as the scientific evaluation of existing technologies/products in a impartial commercial environment. Current research projects involve spray application, pest and disease forecasting as well as co-supervising in several post-graduate plant pathology studies at the University of Stellenbosch.

TRAINING SERVICES

Various courses related to crop protection support including but not limited to:

- Safe handling of agricultural pesticides
- Pest and Disease scouting
- Pesticide application
- Other technical topics related to crop production
